

# Origami Bluebird

This project, which kids really enjoy, was on [yasutomo.com](http://yasutomo.com) but the link is now broken. Also see [PDF version](#). Also see more children's activities on [www.sialis.org/children.htm](http://www.sialis.org/children.htm)

1. Fold in half diagonally then fold top section about two thirds of the way down.

2. Valley fold top layer only up to form two equal triangles.

3. Valley fold unit in half along dashed line. Turn unit 90 degrees going to the right.

4. Valley fold top layer up along dashed line.

5. Mountain fold bottom layer back to align with top layer.

6. The wings should line up with each other.

7. Fold down a little corner at the head area then unfold. Make the top of the head a valley fold and push down to create the beak.

8. Fold the wing down at top of the body edge as shown in illustration. Turn the unit over and repeat on the other side.

9. Your bluebird is now complete!
